

## **ABSTRACT**

GNU/Linux comes in various distributions and the installation of various packages in them differs. The way they are packaged are different as well as the method of distributing the package related files. This produces incompatibility within various GNU/Linux distributions. In order to avoid this Universal Package Manager is suggested which has the following architecture. All files of a package are installed under a single directory with the name being that of the package itself. In order to maintain the distribution's integrity, based on the package information and the distribution, symbolic links are created in the directories like /usr/bin, /usr/lib etc where the file should actually have resided. When a package is deleted, the corresponding folder is deleted. The project is focused on management of .deb, tar.gz and rpm packages.

## **ACKNOWLEDGEMENT**

This project report is the result of accumulated guidance, direction and support of several people. We take this opportunity to express our gratitude to all, whose contributions in this project can never be forgotten.

First we thank God for the successful completion of the project. We are grateful to Dr.Gylson Thomas, Prof and Head of Department of Computer science and Engineering, Mr.Govind Raj and Mr. Shareek, our project co-coordinators and also to Mrs.Femina and Ms.Reswin, our group tutors.

We express our sincere feelings of gratitude to our project guide Ms.Reeshma.K for her sincere help, guidance and advice at the crucial junctures throughout the successful completion of the project. Lastly we thank our friends for the valuable support for the successful completion of this phase of the project.

## **TABLE OF CONTENTS**

**NO.****TOPIC****PAGE NO.**

1.	INTRODUCTION	1
	1.1 MOTIVATION AND OVERVIEW	1
	1.2 LITERATURE SURVEY	1
	1.3 PROPOSED VFS DRIVER	2
2.	REQUIREMENTS	4
	2.1 HARDWARE REQUIREMENTS	4
	2.2 SOFTWARE REQUIREMENTS	4
3.	VIRTUAL FILESYSTEM	5
	3.1 PRINCIPLE	6
	3.2 VFS STRUCTURE AND OPERATION	8
	3.3 REGISTERING FILESYSTEM	9
	3.4 MOUNTING A FILESYSTEM	10
	3.5 FINDING A FILE IN VFS	12
	3.6 UNMOUNTING FILESYSTEM	13
	3.7 IMPLEMENTATION OF VFS IN LINUX KERNEL	13
	3.7.1 FILESYSTEM REGISTRATION / UNREGISTRATION	13
	3.7.2 SYSTEM CALLS	16
4.	REACTOS	18
	4.1 CURRENT AND FUTURE DEVELOPMENT	20
	4.2 FEATURES	20
	4.3 REACTOS SUBSYSTEM	21
	4.4 NATIVE API ARCHITECTURE	23
	4.5 BUILDING REACTOS	23
	4.5.1 COMMANDS FOR INVOKING A BUILD	24
	4.5.2 OTHER COMMANDS	24
	4.5.3 BUILDING MODULES	25
5.	VFS DRIVER DEVELOPMENT	26
	5.1 REACTOS DRIVER DEVELOPMENT	26
	5.2 LAYERED DRIVER ARCHITECTURE	26
	5.3 INF FILES	28
6.	DESIGN AND IMPLEMENTATION	30
7.	FUTURE ENHANCEMENTS	31
